EDUCATION

Rochester Institute of Technology

Aug 2024 – May 2027

Master of Science in Computer Science

Ramrao Adik Institute of Technology, Navi Mumbai

Aug 2017 – Jun 2021

Bachelor of Engineering in Electronics Engineering

EXPERIENCE

Research Assistant, Federated Learning Platform

Apr 2025 – Present

Rochester Institute of Technology

- Designed and built scalable backend services and APIs for a distributed ML platform on AWS, enabling reliable orchestration of training jobs across heterogeneous clients.
- Developed extensible REST APIs with JWT authentication and real-time WebSocket log streaming, improving system observability and supporting concurrent user workflows.
- Implemented resiliency and performance optimizations such as parameter chunking over gRPC and automated deployment runbooks, reducing environment setup time to under 2 minutes.

Software Development Engineer

Jul 2021 – Jun 2024

TATA Consultancy Services

- Built and modernized enterprise web applications using React, Node.js, and SQL, delivering scalable APIs and data pipelines supporting high-volume business transactions.
- Collaborated with product managers and cross-functional stakeholders to debug production issues, build dashboards, and improve maintainability of customer-facing features.

TECHNICAL SKILLS

Programming: Python, Java, JavaScript/TypeScript, C#, SQL

ML/AI: NLP, Embeddings, Retrieval-Augmented Generation (RAG), Transformers (Hugging Face), PyTorch, Model Evaluation

Cloud & Data: AWS (EC2, Lambda, API Gateway, SQS, DynamoDB, S3), Serverless, ETL/Pipelines

Frontend & Backend: React, Spring Boot, Node.js, REST APIs, Microservices, WebSockets, JWT, GraphQL (currently exploring)

Vector Search: Pinecone, Semantic Search, Similarity Ranking

DevOps & Observability: Terraform, Docker, GitHub Actions, Logging, Metrics, CloudWatch, Monitoring

Databases: PostgreSQL, DynamoDB, MongoDB, Redis

PROJECTS

DevDocBot — AI-Powered RAG Knowledge Assistant | [GitHub](#)

Jan 2026

- Built a production-grade retrieval-augmented generation system to aggregate technical documentation and generate context-aware answers for developers and stakeholders.
- Designed an event-driven ingestion pipeline (GitHub Webhooks → API Gateway → SQS → Lambda) and a low-latency retrieval layer with DynamoDB caching for reliable inference workflows.
- Implemented monitoring dashboards tracking latency, cache hit rate, and indexing throughput to ensure reliability and maintainability of AI-driven features.
- Tech Stack:* Python, AWS Lambda, API Gateway, SQS, DynamoDB, Pinecone, Hugging Face, Terraform, CloudWatch

FedLearn Platform — Distributed Full-Stack ML System | [GitHub](#)

Apr 2025 – Present

- Developed an end-to-end platform enabling distributed model training and experimentation without centralizing data, supporting large-scale ML workflows.
- Built a full-stack web application with a React dashboard and Spring Boot APIs to manage projects, trigger jobs on AWS, and stream real-time training logs.
- Engineered reliability improvements for long-running workloads, including heartbeat mechanisms and chunked communication for large model parameters.
- Tech Stack:* Python, PyTorch, Hugging Face Transformers, Java, Spring Boot, React, AWS EC2, Docker, gRPC, PostgreSQL
